

INFINITY RISING **RISE** TOKENOMICS

Version 1.0 - November 3, 2025

CORE COMPLIANCE DISCLAIMERS

NOT A SECURITY / UTILITY TOKEN DISCLAIMER

The RISE token is designed solely as a utility token within the Infinity Rising ecosystem. It is not intended to be a security, investment contract, or financial instrument in any jurisdiction. The token's purpose is to facilitate gameplay, marketplace transactions, infrastructure participation, and governance. Ownership of RISE does not grant any rights to profits, revenue, or ownership in Infinity Rising or its affiliates.

NO INVESTMENT ADVICE DISCLAIMER

This document does not constitute investment advice, financial advice, trading advice, or any other form of professional advice. The information provided is for educational and informational purposes only. Users and readers should conduct their own due diligence and consult professional advisors before making any decisions regarding the use or acquisition of RISE tokens or related digital assets.

FORWARD-LOOKING STATEMENTS DISCLAIMER

This paper may contain forward-looking statements regarding the Infinity Rising ecosystem, the RISE token, related features, strategies, future developments, or projections. These statements are not guarantees of future performance and involve risks and uncertainties. Actual results may differ materially from those expressed or implied. Infinity Rising assumes no obligation to update forward-looking statements.

GAMING & POA SPECIFIC DISCLAIMER

Gameplay features, Player Owned Assets (POA, non-fungible tokens), and reward mechanics described in this document are subject to change as the game evolves. Certain in-game rewards may be skill-based or require progression milestones. POAs represent digital collectibles with functional or cosmetic utility in-game and do not represent financial instruments or securities.

JURISDICTIONAL / REGULATORY DISCLAIMER

The availability of RISE tokens, POAs, and related services may be limited or restricted in certain jurisdictions due to regulatory requirements. It is the responsibility of each participant to ensure compliance with applicable laws and regulations in their jurisdiction before acquiring or using RISE tokens.

NO GUARANTEE OF VALUE DISCLAIMER

RISE tokens have no intrinsic or guaranteed value. Their utility is limited to the Infinity Rising ecosystem, and demand or pricing may fluctuate over time based on adoption, usage, and external market factors.

1.0 INTRODUCTION & PURPOSE

Infinity Rising (“Infinity Rising”, “we”, “us”, “our”, “the company”) is a next-generation sandbox MMO that combines world-class gameplay with a player-owned economy powered by blockchain. Set in a vast and evolving universe, the game delivers immersive exploration, progression, and competition while giving players true ownership of their digital assets through the RISE token and player owned asset (POA) integration.

The Infinity Rising platform leverages blockchain infrastructure to manage marketplace transactions, asset ownership, staking, and rewards in a way that feels seamless to the player. By embedding RISE at the center of this ecosystem, Infinity Rising ensures that its economy is not only engaging but also sustainable, secure, and scalable—uniting traditional gamers and Web3 adopters in one cohesive experience.

The goal of this paper is to map out Infinity Rising’s economic model and highlight how RISE underpins everything from daily gameplay to the broader ecosystem. Specifically, the tokenomics are built around:

- ♦ Putting power in players’ hands via genuine ownership and in-game asset integration.
- ♦ Creating real-world utility, with RISE handling everything from staking to governance votes.
- ♦ Building in sustainability features like a hard-capped supply and measured reward emissions.
- ♦ Fueling expansion by keeping things accessible for beginners, then layering on advanced perks as users dive deeper into blockchain elements.

Through this design, Infinity Rising delivers the rare combination of AAA-quality gameplay and a blockchain-powered economy, positioning it as a leader in the next generation of gaming.

Ecosystem Currency Overview

Before diving into the details, we've outlined the role of each currency in the Infinity Rising ecosystem below. Each currency, on-chain or off-chain, plays a unique role in shaping the game and token economy.

✦ **Cornucopias Credits (CC)**

Standard in-game currency issued by the Nation of Cornucopias. Earned through play (quests, trade, loot, activities) and spent on everyday costs—repairs, crafting fees, travel, and vendor purchases. Off-chain currency.

✦ **Infinity**

A reward-point currency earned by completing gameplay milestones and events. Infinity can be redeemed for select items and discounts in the marketplace, and it also determines your share of the daily RISE reward pool. Track and claim your RISE in the Reward Dashboard whenever it becomes available.

Infinity also serves as the authorization mechanism within the Asset Synthesizer (section 6.3.2). When players spend Infinity, a certain amount is consumed in order to mint an eligible in-game asset to an on-chain asset.

Infinity is an off-chain currency and is not directly exchanged for RISE, but is used in determining a player's share of the RISE gameplay reward pool.

✦ **RISE**

Premium on-chain currency purchased with real money. Used for premium purchases such as Cornucopias Credit Packs, cosmetics, seasonal content, and infrastructure services.

2.0 TOKEN ECONOMY & VALUE CAPTURE

The RISE token is the backbone of the Infinity Rising economy, serving as both the medium of exchange and the mechanism through which value is captured and recycled back into the ecosystem. The economy is designed to ensure that gameplay, infrastructure, and marketplace activity all generate demand for RISE, while deflationary mechanisms and capped emissions reinforce sustainability over time. At a high level, the token economy operates as a semi-closed-loop value cycle:

Marketplace Transactions

- ✦ Players purchase and trade assets, with a portion of fees collected in RISE.
- ✦ Certain premium assets are only purchasable in RISE, anchoring direct utility.

Revenue Capture & Conversion

- ✦ A portion of fiat-based purchases (e.g., credit cards) are converted into RISE through buybacks.
- ✦ This ensures that the majority of economic activity, whether Web2 or Web3, ultimately flows into the RISE economy.

Reward Distribution

- ✦ Gameplay rewards, staking, and node incentives are distributed in RISE.
- ✦ Infinity reward points act as the in-game metric and marketplace discount, but settlement and payouts are tied to the RISE pool.

Deflationary Pressure

- ✦ Buybacks and burns reduce effective circulating supply.
- ✦ Node infrastructure and seasonal staking create additional sinks.

Reinvestment & Growth

- ✦ Recycled value returns to the reward pool, infrastructure, and ecosystem expansion, sustaining a healthy balance between player incentives and long-term token value.

Under this setup, key activities in Infinity Rising—such as onboarding new players via fiat payments, trading player-owned assets, or running nodes to deliver content—are intended to increase the need for RISE. Greater adoption of gameplay and infrastructure will help maintain the token's role in the ecosystem over time.

3.0 SUPPLY & DISTRIBUTION

3.1 Token Supply

Note: For clarity and consistency, [this document restates the original COPI tokenomics framework under the new RISE structure](#). All historical allocations, TGE schedules, and emissions are being carried forward to RISE on a 1:1 basis, with adjustments only where explicitly noted (e.g. supply reduction, category rebalancing). This ensures continuity for the community while highlighting the improvements introduced through migration (details provided in section 8.0).

Token Name: Infinity Rising (RISE)

Max Supply: 3,000,000,000 RISE

- ✦ **Rewarding Allocation:** 32.2%
- ✦ **Team & Advisors:** 27.4%
- ✦ **Reserve / Partnership Allocation:** 17.9%
- ✦ **Token Sale Allocation:** 17.0%
- ✦ **Liquidity Allocation:** 5.5%

Unlocked Liquidity At Listing: 34,560,000 RISE

Initial Liquidity Size: \$324,611 worth of BNB & 31,636,000 RISE

- ✦ **TGE Date (Original COPI Launch):** December 10, 2021
- ✦ **COPI Listing Price:** \$0.01
- ✦ **RISE Token Launch Date:** November 13, 2025
- ✦ **Token Standard:** RISE is a multi-chain token with its native issuance on Ethereum as an ERC-20 token, and bridged representations on other networks:

CHAIN	CONTRACT ADDRESS
Ethereum	0xB7EABBad88c9F3889f157B00383b1Db28E7EF89A
Base	0xf25620f89d0e23a8ba7b11ab3235b66268794196
Cardano	31bdb2d8ed6e2623e121b6db134a1491f4252b9ea87d928eb5290026
BSC	0x0d10f601dd5034f2a5e056e813b9cf90a6cd53f4

3.2

Vesting & Unlocks*

* Restated for original COPI TGE, December 10, 2021

CATEGORY	ALLOCATION	ALLOCATION (%)	TGE UNLOCK (%)	TGE UNLOCK	CLIFF	VESTING	MONTHLY UNLOCK(%)
Community Rewards	724,110,000	24.1%	8.0%	57,600,000	24 mo.	36 mo.	2.55%
Nodes	241,370,000	8.1%	0.0%		24 mo.	36 mo.	2.78%

TOTAL	3,000,000,000	100%		168,000,000			

4.0 EMISSIONS & REWARDS

4.1 Overview

The Infinity Rising reward system is designed to align incentives between players, token holders, and the broader ecosystem by directly tying benefits to both player-owned assets and in-game performance. At its core, the framework emphasizes sustainability and long-term engagement, with rewards structured to promote onboarding, adoption, and retention rather than extraction or dilution.

Rewards are broken down into several categories:

- ♦ **Staking RISE:** 13% of Community Rewards allocation
- ♦ **Staking LP Tokens:** 24% of Community Rewards allocation
- ♦ **Skilled Gameplay:** 63% of Community Rewards allocation
- ♦ **Nodes:** 100% of Nodes Reward allocation

Rewards are distributed from a fixed-supply pool at variable frequencies, determined by the outstanding tokens available. Before the start of each season, a percentage of the pool—capped at 0.05% (5 basis points)—is allocated to establish an estimated maximum daily distribution for that season.

This design, along with refill mechanisms, ensures that:

- ♦ The pool cannot be fully depleted, since distributions are always proportional to the remaining balance.
- ♦ The pool gradually decreases over time, creating scarcity.
- ♦ Inflation is capped and fully compatible with a fixed-supply token model, avoiding the risks of perpetual inflation systems.

4.2 Reward Mechanics

Rewards for users are calculated with one primary concept – user contribution determines your portion of the daily rewards.

$$R_{D\%} = \frac{C_x}{\sum_1^N C_1 \dots C_N}$$

Simplified Formula:

Allocation of the Reward per User = The Contribution per User over the defined time period / The Sum of the Contributions for All of the Users in the System for the defined time period

4.2.1 The user contribution for each category of rewards is defined as follows:

- ✦ **Number of LP tokens staked**, weighted by duration (Multiplier)
 - LP Tokens are obtained by users through a DEX, and then staked to the Infinity Rising ecosystem contracts. Approved DEX's and pairs are below:
 - Aerodrome Slipstream (Base): RISE/WETH
 - Minswap (Cardano): RISE/ADA
- ✦ **Number of RISE tokens staked**, weighted by duration (Multiplier)
- ✦ **Users running the nodes** as described in the Nodes section
- ✦ **Skilled Gameplay** activities as described in the Skilled Gameplay section

4.2.2 Multiplier Mechanics

For items with a multiplier (LP staking & RISE staking), we can define the contribution (C) as a function of both the multiplier (M) and the tokens staked (T) as follows:

$$C_x = T \times M$$

We can now define the multiplier (M) as a function of the duration for which the tokens were staked (in weeks), where (D) represents the stake duration in weeks, as follows:

$$M = 1 + 0.2 \times D^{0.5}$$

Providing us with the following curve, where the multiplier increases over time (capped at 100 weeks):

The tokens can be withdrawn at any time following deposit, however, withdrawing tokens prior to the 13 weeks of duration forfeits any rewards earned. Once the maximum multiplier is reached, the rewards will continue to accrue using the maximum multiplier. For example, if a user stakes for 50 weeks, their duration multiplier is based on 50 weeks. If a user stakes for 110 weeks, their duration multiplier is capped at the 100-week multiplier. At this time, the multiplier staking is only available on EVM chains, but is coming soon for Cardano.

Each deposit a user makes into a staking contract contains its own duration timeline. Rewards do not compound; they must be claimed and deposited to earn additional rewards.

4.2.3 **Skilled Gameplay Rewards**

As players venture into Infinity Rising, persistence, progression, and skill ultimately determine the amount of RISE rewards earned. The system encourages player engagement from the start, with mechanisms that preserve fairness and long-term ecosystem balance. Each day's total reward pool is allocated across all gameplay modes, incentivizing players to explore multiple areas of the game and fully utilize their assets.

4.2.3.1 Infinity represents the user's contribution within the reward calculation formula and are the foundation of this system. Players earn Infinity through in-game performance, time invested, and daily activity participation across all Infinity Rising game modes. As players accumulate points over the course of a reward period, their total points determines their proportional share of the RISE rewards distributed for that cycle. This structure balances skill, engagement, and consistency—ensuring both casual and dedicated players benefit from gameplay while keeping rewards closely tied to activity and achievement.

Infinity can be earned through all facets of the game, including, but not limited to:

- | | |
|-----------------------|------------------|
| ♦ Digital Real Estate | ♦ Farming |
| ♦ Racing Events | ♦ Gathering |
| ♦ Quests | ♦ Crafting |
| ♦ Exploration | ♦ Building |
| ♦ Mining | ♦ Combat |
| ♦ Fishing | ♦ Other Gameplay |

All players earn Infinity, which serves a dual purpose:

- ♦ Infinity can be redeemed in the marketplace for discount on purchases
- ♦ Infinity determine a player's share of the daily RISE reward pool

$$R_{D\%} = \frac{C_x}{\sum_1^N C_1 \dots C_N}$$

Players can increase their reward multipliers in several ways. Multipliers act as boosts on top of the Infinity you earn. For example, when you gain base-level Infinity from an activity, any multiplier applied increases both your share of the daily RISE rewards and the value of your in-store discounts. Multipliers don't increase the total rewards distributed, but they allow players to boost their individual share by earning a larger portion of the overall pool.

Ways to earn higher multipliers include:

- ✦ Liquid staking of RISE in your player account or purchasing a season pass. This method is currently being planned and likely to launch following Season X.
- ✦ Using eligible Player-Owned-Assets:
 - ✦ Multipliers based on rarity
 - ✦ Multipliers based on collection

These options ensure that every type of player has a path to enhance their rewards. You can combine methods to maximize your multiplier and secure a larger share of the reward pool.

4.2.3.2 **Gameplay Reward Eligibility Framework**

Infinity Rising's reward system is designed to balance accessibility for new players with sustainable, long-term value for token holders. As we prepare for our Alpha release, we will introduce the Infinity reward point system — a progression-based framework that rewards players for in-game activity while ensuring rewards flow to those contributing meaningfully to the ecosystem. This system protects against value extraction and encourages ongoing participation across all gameplay modes.

Phase 1 — Testing through Alpha to Season X

All player types will be able to earn Infinity reward points through regular gameplay. These points can be redeemed for marketplace discounts or used within the Asset Synthesizer to convert eligible in-game items into fully owned player assets.

However, to qualify for daily distributions from the RISE gameplay rewards pool, beyond the standard Infinity reward points, players must maintain a minimum balance of 3,000 RISE* in their connected player account wallets. This threshold serves as an eligibility safeguard, ensuring that rewards go to players who actively contribute to the ecosystem rather than to automated or exploitative behaviors. The goal isn't to create a "pay-to-earn" system, but to maintain fairness and integrity within the economy. RISE held in your player account always remains fully owned and accessible to you.

If you are a node operator, your required RISE balance for node operations will also count toward gameplay reward eligibility.

*The 3,000 RISE minimum is a dynamic figure that may be adjusted periodically based on market conditions, player growth, and ecosystem performance to maintain fairness and sustainability across the community.

Phase 2 — Alpha to Beta and Beyond

Following the Alpha launch, Infinity Rising will evolve toward a seasonal reward structure with additional gameplay loops and evolving incentives. At this stage, a season pass program will be introduced, combining access to exclusive content with reward eligibility benefits and other premium perks.

4.2.3.3 POA Multipliers & In-Game Resources

POAs play a central role in enhancing the player experience within Infinity Rising. By leveraging different collections and rarities, players can unlock multipliers that boost their Infinity earnings across a wide spectrum of gameplay activities. This creates meaningful incentives for players to diversify and strategically utilize their asset ownership.

The multiplier framework ensures that POAs are more than collectibles—they are functional assets that directly impact progression, competition, and rewards. Rare and collection-based multipliers reward dedicated players who engage across the ecosystem, while still allowing entry-level assets to provide a foundation for participation.

In addition, eligible POAs will participate directly in the in-game reward system, enabling players to claim free resources, such as lumber and other core materials, that are vital for crafting, building, and progression. This further embeds POAs into the economic loop of the game, ensuring their value extends beyond cosmetic appeal and into ongoing utility.

4.2.4 Node Rewards

Infinity Rising will empower users to participate in the platform's distributed node network, allowing them to run nodes of various types. Users can host their own nodes and earn RISE as rewards. To operate a node, players must purchase a license for an eligible node type, such as a File Node Access Key, and activate it as a node operator. As part of the benefits, they will gain access to exclusive features such as:

- ✦ The node owner discord group
- ✦ Early testing access on desktop, mobile, and web platforms.
- ✦ Exclusive node owner POAs, including character game outfits, emotes, and backpacks.

There are three primary node types planned for distribution in the Infinity Rising network:

- ✦ **File Nodes** (active) – The File Node Network is a decentralized, player-run system that delivers game files in secure, verified chunks – offering faster downloads, greater reliability, and eliminating the single point of failure of centralized servers.
 - ✦ 20k Supply
 - ✦ 9k licenses sold and operational
- ✦ **Game Nodes** (planning) – When playing the PC version of Infinity Rising, players connect to the network through an Unreal Engine Server Instance and seamlessly switch between RISE Game Nodes as they move between mini-games and main gameplay.
- ✦ **Other Nodes** (planning) – Other game, data, and infrastructure based nodes are currently being planned.

Current Schedule of Reward Emissions for Nodes:

PERIOD	TYPE	TOTAL AMOUNT
JULY 2024 - JUNE 2025	Base Reward Only	26,000,000 RISE
JULY 2025 - DECEMBER 2025	Transition to Base & Performance	13,000,000 RISE
2026	Base + Performance + Bonus Pool	23,750,000 RISE
2027	Base + Performance + Bonus Pool	21,680,000 RISE
2028+	Subject to Future Review	Subject to Future Review

Node rewards are predefined through 2027 and reviewed periodically to account for new license issuances or additional node types entering circulation. Each operator's rewards are determined by the daily allocation for node operators, adjusted for performance and uptime.

Each node license requires a liquid stake of 3,000 RISE in the player's account to qualify for daily rewards, with staking capped at 15,000 RISE for holders of multiple licenses.

5.0 GOVERNANCE

In contrast to the approach some projects have taken to expedite the transition to full decentralization, Infinity Rising has implemented a calculated methodical approach, which prioritizes game development, playability, and ecosystem stability before increasing the role of decentralized governance. Infinity Rising is committed to evolving into a more decentralized ecosystem over time, while ensuring governance is practical, fair, and aligned with the long-term vision of the project. Governance participation will be directly tied to RISE ownership and staking, with a phased rollout designed to scale as the community grows.

5.1 Voting Eligibility

Through the Infinity Rising player account system, all cross-chain RISE balances held in the account will earn governance credits ("voting tokens"). Initially, these will function as **off-chain credits** recorded within the player account system. As infrastructure matures, governance will transition to a **full on-chain voting system** directly accessible through the Infinity Rising UI.

Voting eligibility will be based on:

- ♦ **Staked RISE tokens**
- ♦ **Staked LP tokens** (weighted by the share of RISE within the pool)
- ♦ **RISE held in player accounts** (credited for voting, even if cross-chain)

Ineligible tokens include:

- ♦ Unclaimed rewards
- ♦ Tokens that are vesting and not yet in circulation

5.2 Voting Process

Votes will be created and managed by project representatives in coordination with the community. Each proposal will clearly outline the subject, rationale, and options available, with formats such as:

- ♦ **Yes / No Polls**
- ♦ **Multiple Choice Polls**

Each proposal will include:

- ♦ A **snapshot date** (balances counted at a fixed point in time to prevent last-minute token swings).
- ♦ A link to a **discussion thread** where the community can debate and propose alternatives.
- ♦ A defined **end date** for voting.

At the close of each vote, results will be tallied and shared transparently with the community. Votes are initially **advisory (non-binding)**, meaning final implementation rests with the project team to ensure alignment with long-term strategy and sustainability. However, as governance matures, the intent is to expand the influence of community voting and gradually **integrate binding mechanisms** where appropriate.

6.0 REVENUE MODEL

The Infinity Rising economy is designed as a living ecosystem. It's a connected world where exploration, creation, competition, and commerce continuously reinforce one another. Within the same universe, players can race, craft, build, explore, mine, fish, farm, and complete quests, all while expanding their presence across the nation of Cornucopias. Every aspect of gameplay ties into a single rewards structure: the more players engage, the more opportunities they have to earn rewards and grow their player owned assets.

This dynamic creates a digital sense of life—where resource management, health, and survival directly influence economic success. Players may join guilds, compete in district-wide challenges, or ultimately design and commercialize their own domes using modular building kits. Every asset has purpose, and every interaction contributes to the broader economy.

At the center of this ecosystem lies the RISE token, which powers marketplace transactions, staking, and rewards distribution. The marketplace has been engineered to serve both mainstream accessibility and deep token utility, ensuring frictionless onboarding for new players while giving experienced users advanced ways to interact with blockchain features.

Beyond player interaction, the Infinity Rising ecosystem generates revenue through multiple interconnected channels.

6.1 Revenue Sources

6.1.1 Marketplace Revenue

- ◆ **Premium Asset Sales**

Items such as vehicles, digital real estate, cosmetic assets, and more are sold directly through the Infinity Rising marketplace. Purchased with fiat, crypto, or RISE to increase new user conversion, however, many premium assets will only be sold in RISE token.

- ◆ **Cornucopias Credits (In-Game Currency Packs)**

Purchased with fiat, crypto, or RISE and used for consumables, crafting materials, and upgrades within the game.

- ◆ **Nodes**

Revenue from node license sales and ongoing network participation, which fund infrastructure rewards and future network expansion.

- ◆ **Season Passes**

There will be four seasons per year. These passes grant access to increased reward multipliers and other perks.

6.1.2 Peer-to-Peer Marketplace

5% Platform Fee – Applied to every player-to-player transaction, with proceeds allocated to RISE burns and reward-pool replenishment. The split between burns and reward pool replenishment will eventually be controlled through governance.

6.1.3 Infrastructure-as-a-Service (IaaS)

- ◆ **File Node Distribution Network**

Licensing and hosting revenue from third-party partners who use the Infinity Node Network to distribute large-scale game or application data.

- ◆ **Data Node Access**

Fees from projects leveraging decentralized data storage, authentication, and database synchronization services powered by the network.

- ◆ **Custom Infrastructure Solutions**

White-label or enterprise contracts for game studios and Web3 applications utilizing our proven node architecture to reduce bandwidth costs and decentralize content delivery.

6.1.4 Revenue Allocation & Buyback Strategy

Upon initiation of the Alpha release on Steam and Epic Infinity Rising will activate a structured buyback framework to reinforce the token economy's long-term sustainability. Because the ecosystem supports fiat, crypto, and RISE payments, the proportion of direct versus buyback-funded contributions will flex based on revenue composition and market conditions.

6.1.5 Initial Commitments

REVENUE SOURCE	ALLOCATION OF FEES / REVENUE	PURPOSE OF ALLOCATION	TYPE	START DATE
Peer-to-Peer Marketplace	100% of trading fees	Burns & Reward Pool	Smart contract-driven automation. Allocation between burns and the reward pool will be team-managed initially, transitioning to community voting over time. Executed daily or as minimum thresholds are reached.	Alpha Launch
Premium Asset Sales	30% of revenue	Dedicated \$RISE buybacks	Smart contract-driven automation for on-chain payments. Team will disclose any buybacks from fiat payments. Executed daily or as minimum thresholds are reached	Alpha Launch
Season Pass	100% of revenue	Dedicated \$RISE buybacks	Smart contract-driven automation for on-chain payments. Team will disclose any buybacks from fiat payments. Executed daily or as minimum thresholds are reached.	Post Alpha Launch
Infra-as-a-Service	Determined prior to MVP	Determined prior to MVP	Determined prior to MVP	Post Alpha Launch

Repurchased RISE will be strategically allocated among three key priorities:

- ♦ **Reward Pool Replenishment**
maintaining gameplay, staking, and node reward emissions.
- ♦ **Liquidity Provision**
improving market depth and price stability across exchanges.
- ♦ **Treasury Resources**
funding ecosystem expansion, development, and infrastructure.

As governance matures, community participation will influence how these resources are deployed.

6.2 Marketplace Roadmap

Phase 2 (expected Q1 2026)

6.2.1 Wallet System & Payments

Infinity Wallet Systems

- ✦ Powered by DFNS MPC architecture, these non-custodial wallets will be cross-chain operable, enabling smooth buying and selling. View more info at dfns.co
- ✦ Encrypted with SSO or email (no seed phrase required), yet fully exportable if needed.
- ✦ Each wallet will automatically include both an EVM and Cardano address.
- ✦ Users won't need to choose a chain — friction is eliminated at checkout.

Credit Cards Accepted

- ✦ This feature will significantly expand adoption. Mainstream users expect credit card options, and providing them ensures higher conversion.
- ✦ These new users will be introduced to RISE through reward incentives, eventually becoming holders as they discover the benefits.
- ✦ Payment Options:
 - ✦ Stripe (direct credit card support)
 - ✦ Apple Pay
 - ✦ Google Pay

Assets purchased with credit cards will be delivered instantly to the user's Infinity Wallet and immediately available in-game (assets not usable in-game will remain crypto-only).

6.2.2 Exclusive Items in RISE only

Certain premium game assets will be exclusively purchasable with RISE, embedding the token at the center of marketplace activity and creating consistent demand. As blockchain gaming becomes more mainstream and players grow increasingly comfortable using RISE as their primary payment method, we will gradually transition toward a system where the majority of assets are sold exclusively in RISE.

In the early stages, however, onboarding new users is the highest priority for our long-term success. Accessibility and ease of entry must take precedence until we reach beta and beyond, at which point deeper token integration will naturally align with a more mature player base.

6.2.3 RISE Rewards on Every Purchase

- ✦ Every purchase on the primary marketplace will reward users with RISE to their rewards dashboard.
 - ✦ Users that pay with RISE will receive more rewards
 - ✦ Users who pay with other currencies will still earn RISE rewards, but at a reduced rate. This helps onboard newcomers and non-crypto players while encouraging them to transition into full-time RISE holders as they engage more deeply with the ecosystem.

6.3 Phase 3+ (Expected Q2 2026)

6.3.1 Smart Contract Peer-to-Peer Marketplace

- ✦ All items will be listed exclusively in RISE – no credit card or alternative currencies accepted.
- ✦ Users can seamlessly trade assets across Base or Cardano via their Infinity Wallet.
- ✦ A 5% platform fee will be collected on each transaction.

6.3.2 Asset Synthesizer

- ✦ Players can earn Infinity reward points in-game by completing core game loops.
- ✦ Certain items (rare, special, or unique) can be converted from in-game assets into player-owned assets through the player dashboard.
- ✦ Conversion requires spending Infinity plus a small fee in RISE, reinforcing token utility.
- ✦ Those assets can be held or sold on the peer-to-peer marketplace.
- ✦ One of the first in-game assets players can earn through skill and dedication is the GTI Jester—a one-of-a-kind racer in the X Class.

The GTI Jester – the first earnable X-Class racer in Infinity Rising.

Traditional Gamer Impact

Hypothetical \$1 Million in credit card sales on marketplace.

INFRASTRUCTURE

Beyond in-game and marketplace functions, RISE derives long-term utility from the core infrastructure we are building to support Infinity Rising and future partner titles. Over time, our internal systems are being formalized into a Product-as-a-Service suite, offered to external studios and platforms, with all activity ultimately settled in RISE. Development of the external service offering remains in preliminary exploration, with commercialization planned as the infrastructure matures

What's becoming a service:

- ♦ **Desktop Launcher**
Authentication, patching, telemetry, and feature placements. Studios access the service via a value-pegged lockup, with monthly fees settled in RISE.
- ♦ **Node Distribution**
Community-run content delivery network with centralized fallback (via AWS or similar). Partners pay per-GB egress and peak usage, while node operators are compensated from that flow (default in RISE).
- ♦ **Game Servers**
Managed hosting, auto-scaling, matchmaking, and analytics. Billed in USD for partner accessibility but settled in RISE, with Stake-for-Savings discounts available.

Why this matters:

- ♦ **Recurring demand**
Lockups, monthly service fees, and node operator payouts create continuous RISE velocity.
- ♦ **Studio-friendly**
Partners are billed in USD, while RISE remains the underlying settlement layer.
- ♦ **Chain-agnostic**
Designed to serve any game, regardless of chain, delivering measurable gains in cost, speed, and reliability.
- ♦ **Aligned incentives**
Node operators earn from real workloads; partners reduce total cost of ownership by staking RISE.

This infrastructure play extends RISE's role well beyond a single game, embedding it as a settlement layer for recurring, real-world workloads across the broader gaming industry. As pilots expand into public case studies and new partners onboard, this arm of the ecosystem will drive one of the most durable forms of RISE utility.

8.0 MIGRATION OVERVIEW

8.1 Overview

Infinity Rising represents the natural evolution of Cornucopias, building on its foundation while addressing the sustainability challenges that have limited prior blockchain gaming economies. The migration to RISE introduces a carefully designed structure that:

- ✦ Corrects supply imbalances and reduces dilution risk.
- ✦ Aligns rewards and tier systems with sustainable engagement, not extraction.
- ✦ Ensures seamless onboarding through upgraded wallet and infrastructure support.

These updates create a more balanced and durable system. One that is built to reward real participation and protect long-term value across the ecosystem.

8.2 Migration Mechanism

A detailed migration guide will be released by the team before the migration date, outlining the step-by-step process and providing full information on migration rewards.

- ✦ **Migration Platform** (Official migration links to be provided by the team) :

- ✦ Chainport - app.chainport.io
- ✦ VyFi - <https://app.vyfi.io/>

- ✦ **Exchange Pause & Relaunch**

- ✦ **November 13, 15:00 UTC** - COPI trading paused on CEXs; liquidity withdrawn from DEXs.
- ✦ **November 13, 16:00 UTC** - RISE trading live on CEXs; liquidity re-established on DEXs (moved to RISE/X pairs).
- ✦ **November 13, 16:00 UTC** - Stake pools open for boosted APRs

- ✦ **Conversion Rate:** 1 COPI = 1 RISE

- ✦ **Migration Duration:** Official migration sites will remain open through December 31, 2026 - a decision to extend or transition to a support based system will be made at that time.

Migration Contracts:

- ✦ Base: [0xf25620f89d0e23a8ba7b11ab3235b66268794196](#)
- ✦ Cardano: [31bdb2d8ed6e2623e121b6db134a1491f4252b9ea87d928eb5290026](#)
- ✦ Initial DEX liquidity will only exist on Base and Cardano. Additional chains, if any, announced post-launch.

As part of the migration process, all official COPI liquidity will be removed from decentralized exchanges on November 13, 15:00 UTC, prior to the activation of RISE trading pairs. Any residual third-party liquidity that remains in legacy COPI pools may be subject to significant price distortion and automated arbitrage activity. Market-making algorithms and trading bots continuously monitor decentralized exchanges for mis-priced assets and may exploit abandoned liquidity by selling depreciated COPI into those pools to extract paired assets. To mitigate potential losses, liquidity providers are strongly advised to withdraw all COPI-related liquidity prior to the official cutoff date / time. Following the migration, legacy COPI pairs will be deprecated and will no longer reflect valid market value.

8.3 Impact on Tokenomics

The total supply of RISE is capped at 3 billion tokens, 840 million fewer than the original COPI supply. The following section outlines the key adjustments and the rationale behind these changes.

Community Rewards: Reduced from **1.75B to 965M**, reclassified into:

- ✦ **Community Rewards:** 724.1M
- ✦ **Node Rewards:** 241.4M

Rewards Pool Change Context

The original rewards pool was designed around a play-to-earn model, with emissions not tied to player growth, KPIs, or product milestones. When the COPI tokenomics were formalized in the COPI Wiki in the spring of 2024, one key improvement was introduced to gameplay rewards—shifting focus toward player engagement and sustainability.

The original play-to-earn allocation used a 10 basis point (0.001) daily index and was heavily front-loaded. This index was introduced as 2.5 basis points (0.00025) in the COPI Wiki, aligning emissions with more sustainable player engagement goals.

This transition from a play-to-earn framework to an engagement-driven model created a large surplus of COPI that would never realistically be distributed, even after accounting for replenishment from revenue. It also introduced unfavorable optics, as it appeared the team would always retain control over a large portion of the total supply. The transition to the RISE token provided the perfect opportunity to realign allocations with the updated index and establish a framework that better reflects actual gameplay and seasonal reward pacing.

A Perspective on Key Parameters

♦ COPI Model (as outlined in the COPI Wiki):

- ♦ **Daily Index:** 0.00025 (2.5 bps) $\times$ total rewards pool balance
- ♦ **Starting Pool:** 1,754,880,000 COPI (gameplay + staking)
- ♦ **Day 1 Cap:** $\approx 438\text{k}$ COPI
- ♦ **10-Year Balance** (assuming no reward replenishment*): $\approx 705\text{M}$ COPI

♦ RISE Model:

- ♦ **Daily Index:** 0.0005 (5 bps) $\times$ total rewards pool balance
- ♦ **Starting Pool:** 965,480,000 RISE
- ♦ **Day 1 Cap:** $\approx 482\text{k}$ RISE
- ♦ **10-Year Balance** (assuming no reward replenishment*): $\approx 155\text{M}$ RISE

*While assuming zero replenishment would be unrealistic and imply deeper project issues, even our conservative revenue model scenarios show that the rewards pool remains healthy and sustainable under the revised index and seasonal framework.

8.3.2 Team / Advisors: The team allocation has been reduced from 921.6M to 821.6M tokens. Even though the team percentage of the total supply increased, this change brings the overall quantity of tokens down while keeping the team's share within common industry ranges. The adjustment is intended to reflect a balanced approach to supply across categories and to show that reductions are not limited to community pools alone. The advisor token allocation was fully vested and distributed by February 2024.

8.3.3 Liquidity: We increased the liquidity allocation by 49.6M to 164.6M. This adjustment provides the flexibility needed to secure listings on leading exchanges such as Bybit, OKX, Binance, Coinbase, Bitget, and Upbit, as we are closer than ever to onboarding players from several new gaming channels. The allocation will be reserved exclusively for top-ranked exchanges and will not be used elsewhere.
